

Comments and Whitespace in HTML

Write clearer HTML with comments, indentation, and intentional spacing.

HTML Comments

Comments are notes in your HTML code that are **ignored by the browser**. They are useful for explaining code or leaving reminders.

Syntax

```
<!-- This is a comment -->
```

Comments do not appear on the webpage. They're only visible in the source code.

Example

```
<!-- This is a comment -->
<p>This is visible content.</p>

<!-- <p>This line will not show on the webpage.</p> -->
<p>This is spaced.</p>
```

Whitespace in HTML

Whitespace includes **spaces, tabs, and newlines** (Enter key). HTML treats multiple spaces as a single space.

Example:

```
<p>This   is   spaced.</p>
```

This will be displayed as:

```
This is spaced.
```

Preserving Spaces and Line Breaks

If you want to preserve spaces and line breaks, use the **<pre>** tag.

Example:

```
<pre>
This is preformatted
text.
</pre>
```

■ **Tip**

- Use comments to explain your HTML when needed.
- Use proper indentation (whitespace) to make your code readable, even though HTML doesn't require it.

Quick takeaway: Comments document your HTML without appearing on the webpage, while whitespace makes source code easier to read. Use `<pre>` when spaces and line breaks need to be preserved.
