

Audio and Video Embedding in HTML

Add audio and video directly to webpages with native HTML5 media elements.

■ Embedding Audio

Use the **<audio>** element to add sound or music to a webpage. The **controls** attribute gives users playback controls such as play, pause, and volume.

Basic Example

```
<audio controls>
  <source src="audio.mp3" type="audio/mpeg">
  Your browser does not support the audio element.
</audio>
```

Key Parts

Part	Purpose
&lt;audio&gt;	Creates the audio player.
controls	Displays playback controls such as play, pause, and volume.
&lt;source&gt;	Specifies the media file and its MIME type.
Fallback text	Provides a message when the browser cannot use the audio element.

Audio Formats

Format	MIME Type
MP3	audio/mpeg
OGG	audio/ogg
WAV	audio/wav

Multiple Audio Sources

You can provide more than one source so the browser can use a supported format.

```
<audio controls>
  <source src="audio.mp3" type="audio/mpeg">
  <source src="audio.ogg" type="audio/ogg">
  Your browser does not support the audio element.
</audio>
```

■ Embedding Video

Use the `<video>` element to add videos to a webpage.

Basic Example

```
<video width="320" height="240" controls>
  <source src="video.mp4" type="video/mp4">
  Your browser does not support the video tag.
</video>
```

Key Attributes

Attribute	Purpose
<code>width</code>	Controls the displayed width of the video.
<code>height</code>	Controls the displayed height of the video.
<code>controls</code>	Displays playback controls.

Video Formats

Format	MIME Type
MP4	video/mp4
WebM	video/webm
OGG	video/ogg

Multiple Video Sources

You can include multiple sources to improve compatibility across browsers.

```
<video controls>
  <source src="movie.mp4" type="video/mp4">
  <source src="movie.ogg" type="video/ogg">
  Your browser does not support the video tag.
</video>
```

■ Tip

- Always provide controls so users can interact with media.
- Use multiple formats for broader browser support.
- Include fallback text for browsers that do not support the media element.

Quick Takeaway

Audio: use `<audio>`. **Video:** use `<video>`. **Sources:** use `<source>` to provide the media file and MIME type.
